      NOTE: This is a 'working draft' sequence. It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* consists of 19 contigs. The true order of the pieces
* is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  * arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. * This record will be updated with the finished sequence * as soon as it is available and the accession number will * be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          contig of 1749 bp in length gap of unknown length contig of 1494 bp in length gap of unknown length gap of unknown length contig of 1498 bp in length contig of 2663 bp in length gap of unknown length gap of unknown length gap of unknown length contig of 1557 bp in length gap of unknown length contig of 3839 bp in length gap of unknown length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   of 18333 bp in length

* NOTE: This is a 'working draft' sequence. It currently
* consists of 7 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

* sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low-pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
However, it should not be assumed that this clone
will be sequenced to completion. In the event that
the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Center: Whitehead Institute/ MIT Center for Genome

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This clone was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyh tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular cDNA clone. However, there are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Eukaryota; Metazoa; Arthropoda; Tracheata; Hexapoda; Insecta; Pterygota; Neptera; Brachycera; Budopterygota; Diptera; Brachycera; Muscomorpha; Ephydroidea; Drosophildae; Drosophila.

```

artifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal periming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAS, and reverse transcription of unspliced precursor RNAS, and reverse transcriptions that result in single base changes. For further information about this sequence, including its location (http://fruitfly.berkeley.edu) or send email to contaminate changes changes in the chartonistic contamination and relationship to other sequences, please visit our Web site change including its location (http://fruitfly.berkeley.edu) or send email to ô 1717 GGCGATGGCACGCTCGCTTCTCCCGGAAGGTATTCGTTGGCGGTCTGCCACCGGACATC 1776 2016 2076 1897 GACGAGAGCAGTGTGCAGCAGCTAATTGACTCGTGCATCACGGATGAGGACAAGCTGTAT 1956 319 320 gatgaaagctctgtgcaggctctcattgatgcattgaagaagatggaaaactctac 379 439 ggggagagagtggaacgatattctcgaaaggtgtttgtaggcggattgcctccagacatt 199 Gaps cataaagctgagagcaaatcctattttcctcctaaaggctatgcattcctgctgtttcaa gttggtggtgttcctcgaccattacgagctgtggagcttgcgatggtaatggatcggcta gatgaagatgagatcacagctagttttcgtcgctttggccctctgattgtggattggcct 1777 GATGAGGATGAGATTACCACTICGTTTCGGCGCTTCGGCCATTGGTCGTTGGCCA 440 agtgacagtgactttgtgatggatggttcacagccacttgacccacgaaaaactatattt 2017 GCCGATGCGGACTATGTGCTTGATGCTACCATGTCACTGGACCCACGCAAAACGGTGTT /note="alignment with genomic scaffold AE003553" /db_xref="FLYBASE:FBgn0035938" ő Length 3114; Indels /organism="Drosophila melanogaster" /strain="y; cn bw sp" /db_xref="taxon:7227"

gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:

STSS are identified using ePCR (Genome Res. 7:541-550) searches of a local mapping efforts.

local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons illanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage. a minimum SEQUENCING READ COVERAGE: Sequencing is completed to

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Peports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             * NOTE: This is a 'working draft' sequence. It currently consists of 22 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as "runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the chromosome X mapping group at the Sanger Centre, Wellcome Trust Genome Campus, Hinxton, UK. Further information can be found at http://www.sanger.ac.uk/HGP/ChrX/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This clone was derived from human PAC library RPCI-5, prepared by Pieter de Jong and coworkers at the Roswell Park Cancer Institute thtp://bacpac.med.buffalo.edu) using the method described by Ioannou et al., Nature Genetics 6:84-9 (1994). The library is from one male donor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                      NOTICE: This sequence may not represent the entire insert of this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The clone sequenced to the left is RP4-555N2; the clone sequenced to the right is RP3-404F18, 200 bp overlap. Actual start of this clone is at base position 1 of RP5-113911; actual end is at 13269 of RP3-404F18.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                             Submitted (21-DEC-1999) Department of Genetics, Washington University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, On Oct 3, 1998 this sequence version replaced gi:3213024.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        **Calibseq_Osbols:**

Japanese

This invention describes novel DNA sequences preferentially expressed in 19A mephropathy patients, and DNA sequences stringently hybridizing to them. Independent claims cover diagnostic reagents for 19A nephropathy incorporating the antisense sequences; the treatment of 19A nephropathy using the antisense sequences for mRNA inhibition; proteins associated with 19A nephropathy, containing sequences encoded by the DNA sequences; antibodies recognizing these proteins; the production of the proteins by culture of host cells transformed with DNA encoding them; diagnostic reagents for 19A nephropathy containing the antibodies; and compositions for the treatment of 19A nephropathy which contain the antibodies. The products of the invention can be used for the diagnosis and treatment of 19A nephropathy which contain the antibodies. The 19A nephropathy. This sequence encodes the human 19A nephropathy-associated protein INP303A which is described in the method the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

                                                                                                                                                           The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                      3301 agcattgctggcctagtcactgaaaaatgtaaactcttatttttgattgcaggtggaagt 3360

The invention relates to isolated polynucleotide (1) and polypeptide (11) sequences. (1) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (1) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (1) and (II) are useful in medical imaging of sites expressing (II). (1) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypetide and polynucleotide sequences have applications in diagnostics forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human cid sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                93 ctcttcatagtggcctgggttcacctcactgcttcagtcaccagaatggggagagagtgg 152

                                                                                                               detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and insectiodes, therapeutics in higher eukaryotes for the development of insectiodes, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLO1976-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                        1.5
                                                                                                                                                                                                                                                                                                                                                                                                                                                           sequences (ABLO1840-ABL16175) and the encoded proteins (AABLO137-ABBP22072).
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                           detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from prosophilar. The invention useful in developmental biology and in elucidating cell signalling and insectiodes, therapeutics in higher eukaryotes for the development of insectiodes, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIGITG-ABL30511), expressed DNA sequences (ABLIGITG-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1717 ggcgatggcacggctcgcttctcccggaaggtattcgttggcggtctgccaccggacatc 1776

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell

New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                             The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL018775) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                      gacgagagcagtgtgcagcagctaattgactcgtgcatcacggatgaggacaagctgtat 2478
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        gatgaggatgagattaccacttcgtttcggcgcttcgggccattggtcgtcgattggcca 2358

The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                         This sequence represents a fragment of the human IgA nephropathy-associated gene of the invention. The gene, or it's fragments, or antibodies recognising the protein can be used the diagnosis and treatment of IgA nephropathy. Antisense DNA (or corresponding RNA) can be used to inhibit translation of mRNA from 1

                                                                                 This invention describes novel DNA sequences preferentially expressed in IgA nephropathy patients, and DNA sequences stringently hybridizing to IgA nephropathy patients cover diagnostic reagents for IgA nephropathy incorporating the antisense sequences; the treatment of IgA nephropathy using the antisense sequences for mRNA inhibition; proteins associated with IgA nephropathy, containing sequences encoded by the DNA sequences; by culture of host cells transformed with DNA encoding them; diagnostic reagents for IgA nephropathy containing the antibodies; and compositions for the treatment of IgA nephropathy which contain the antibodies. The products of the invention can be used for the diagnosis and treatment of IgA nephropathy which contain the antibodies. The IgA nephropathy associated protein INP303A CDNA fragment which is described
                                                                                                                                                                                                                                                                                                                                                                      2916

gene. The invention also relates to compositions and methods for haplotying and/or genotyping OSM gene in an individual. Polyuuclectides of the invention are useful in studying the expression and function of OSM, and in expressing OSM protein for use in screening candidate drugs to treat diseases related to OSM activity. They are also useful for therapeutic purposes. Methods of the invention are useful for determining whether an individual has a haplotype or haplotype pairs. The method is also useful for improving the efficacy and reliability of several steps in the discovery and development of drugs for treating diseases associated with OSM activity, e.g. cancer, diseases involving lung inflammation and rheumatoid arthritis. The present sequence is human OSM gene located on chromosome 22q12.2.
                                                                                                                                                                                                                                                                                                       ttggttttttatgcacactaaaaaatacctacatctcactgccttattccaacataagtt 2182

measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3353 giggaagitaagccataigictiggaigatcagcigigigaigaaigicagggggccgt 3412

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          5
                                                                                                                                          The invention relates to genetic variants of human oncostatin M (OSM) gene. The invention also relates to compositions and methods for hablotyping and/or genotyping OSM gene in an individual. Polynucleotides of the invention are useful in studying the expression and function of OSM, and in expressing OSM protein for use in screening candidate drugs to treat diseases related to OSM activity. They are also useful for therapeutic purposes. Methods of the invention are useful for determining whether an individual has a haplotype or haplotype pairs. The method is also useful for improving the efficacy and reliability of several steps in the discovery and development of drugs for treating diseases associated with OSM activity, e.g. cancer, diseases involving lung inflammation and rheumatoid arthritis. The present sequence is human OSM gene located on chromosome 22q12.2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2242

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    ; Search time 95.55 Seconds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 43,
